D'Olier

Bulletin No. 26

Light shades

An eight-candle-power lamp, with a D'OLIER UNIVERSAL SOCKET AND SHADE, gives good light where needed—no glare, and protection to the eyes of the user.

While a sixteen-candle-power lamp, used in the ordinary way, gives a small amount of light on the work, with a bright light on the face, causing the eyes of the user to be strained.

Universal Sockets and Shades

No. 302

Wherever You Need Light You Want Light

The D'OLIER UNIVERSAL SOCKETS AND SHADES will suspend the lamps in an horizontal position, allowing them to be rotated around the axis of the cord or socket, and the shade will rotate around the lamp, thus enabling a well-diffused white light to be obtained in any desired direction.

Style Nos. 202, 402 and 602 D'Olier Universal Sockets and Shades

are shown above in three different positions. These fittings may be attached to any socket, and the lamps may be rotated around the axis of its suspension, and the shades rotated around the lamp, thus giving light in any desired location.

Universal Sockets and Shades

The above light is not exaggerated ; when a lamp is used with the D'OLIER UNIVERSAL SOCKET AND SHADE, a very large area is well lighted.

The Light that Shines in the Workman's Eyes

is a handicap that shows both in the quality and quantity of his work. It isn't fatal, but is one of those innumerable "LITTLE THINGS" which in the aggregate make such a difference in the profits.

D'olier

Universal Sockets and Shades

The incandescent lamp used in show-window lighting should be arranged so as not to be seen from the outside or street. The above cut shows a window light with standard lamps used with the D'OLIER UNIVERSAL SOCKETS AND SHADES.

Our style Nos. 402, 802, 202 and 602 may be arranged on the upper part of the window as shown in the above cut by using a standard receptacle. Any number of lights may be equally spaced without the bulky row reflector.

No. 602 or No. 402 will evenly illumine the material in the window, without making one part of the window brighter than another, as is the case with other styles of window reflectors.

No. 83

D'Olier Balanced Rotary Socket

The D'OLIER Balanced Rotary Socket allows a lamp to be suspended in a horizontal position, and also rotate around the axis of the cord or socket. Any of our standard half shades may be used with this socket.

No. 83. Dipped Brass, each. \$1.25

No. 84

D'Olier Rotable Twin Socket

The Rotable Twin Socket allows the same advantages as the single Rotating Socket, with the additional advantage of permitting two lights or an attachment plug for fan connection.

No. 84. Dipped Brass, each. \$1.25

Universal Sockets and Shades

No. 302

No. 302 shows a style of Universal Socket and Shade which is best adapted for good results in lighting when the lamp is to be used close to the work, as the shade used on this fitting radiates light over a large area.

No. 402

No. 402 allows the use of two eight-candle-power lamps instead of one sixteen-candle-power lamp; two sixteen-candle-power lamps instead of one thirty-two-candle power. The distribution of light from the style No. 402 gives even illumination over a large area when the lamps are to be used close to the material to be lighted.

No. 902

No. 902 will concentrate the light over a smaller area than the No. 302. When the lamp is to be used far from the material to be lighted, or when a stronger light is to be used on a small area, style No. 902 gives the best effects.

No. 602

No. 602 allows two smaller candle-power lamps to be used instead of increasing the candle power of one lamp. No better shade fitting is more effective for very bright illumination when the lamps are to be used six or ten feet away from the material to be lighted.

Shades

Catalogue Number	Diam. Inches	Depth Inches	Angle Degr's	Standard Finish Per dozen	Special Finishes Per dozen
90,	5	1 3/4	15°	\$1.10	\$1.40
91,	5	1 3/4	30°	1.10	1.40
98,	5	1 3/4	Horizontal	1.10	1.40
99,	5	1 3/4	45°	1.10	1.40

Nos. 98, 90, 91, 99 have a hole punched in the form which allows the shade to be supported by the lamp itself. The shade does not depend upon the socket or holder for support.

Catalogue Number	Diam. Inches	Depth Inches	Angle Degr's	Standard Finish Per dozen	Special Finishes Per dozen
60,	5 1/4	2 1/4	15°	\$1.20	\$1.50

Metal Shades

Wherever You Need Light You Want Light

The No. 39 Rotating Shade in four different positions, with and without wire guard.

How to secure the proper amount of good light on the work is a problem. You have had considerable experience in the need of good light, and we have made the subject a special study.

You cannot get more light out of a lamp than the lamp will give, but you can use the light given out to the best advantage.

Our angle rotating Steel Shade will allow the greater part of the light of the lamp to be used where it is most needed. It does not make the shop dark, for the shade hangs at an angle which allows a considerable amount of the light of the lamp to go directly above, while the workman is protected from the glare of the direct light of the lamp. Instead of seeing a bright light, you can see the work that the light is radiated on.

A good light on the work means accurate and quick measurements.

A good light on the work means tool conditions to be noticed promptly.

A good light on the work enables blemishes and defects to be discovered.

All of these are important factors in the quantity and quality of work produced ; and an investment in shades for your lamps will without a doubt give you possibilities of increased output of materials.

Although you have a generally artificially lighted shop, yet you need a local light.

Although you have a day-lighted shop, yet you need local artificial lighting in dark places.

Although you are using 16 candle-power Lamps, yet an 8 candle-power with a shade may give you sufficient light.

Dolier

Shades

All shades have an attached shade-holder (no extra shade-holder required)
The inside surface has a satin aluminium finish, which diffuses a mellow, white light

Catalogue Number		Diam. Inches	Depth Inches	Angle Degrees	Standard Finish Per dozen	Special Finishes Per dozen
35.	Parabola ex. sh. holder,	6	2 1/2	90°	\$3.00	\$4.50
36.	" " " "	6	2 1/2	45°	3.00	4.50
37.	" " " "	6	3 3/4	Horizontal	3.00	4.50
55.	" " " "	6 1/2	3	90°	4.20	6.00
56.	" " " "	6 1/2	3	45°	4.20	6.00
57.	" " " "	6 1/2	4 1/4	Horizontal	4.20	6.00

When using shades with extended holders, the lamp is nearly concealed by the shade and the light of the lamp is concentrated more than with the shade without the extended holder.

Catalogue Number		Diam. Inches	Depth Inches	Angle Degrees	Standard Finish Per dozen	Special Finishes Per dozen
25.	Half Shade,	5 5/8	2 1/2	Horizontal	\$2.00	\$3.00
26.	" " "	5 5/8	1 5/8	"	2.00	3.00

With the D'OLIER No. 25 OR 26 HALF SHADE you need no extra shade holder. The inside surface of the shade is finished so as to diffuse a soft white light over a large area. The Shade can be adapted to show-window, picture-lighting, portable desk lamps, etc.

You may think the shade concentrates the light—it does not, on the contrary the light is radiated over a very large area.

Standard Finish—Green Enamel

Shades

47-22

48-21

17-20

18-19

Catalogue Number	Diameter Inches	Depth Inches	Angle Degrees	Standard Finish Per dozen	Special Finishes Per dozen
47. Cone ext. sh. holder,	7	4	Horizontal	\$3.00	\$4.50
48. Cone,	7	3	"	2.00	3.25
21. Cone,	8	3½	"	2.50	3.13
22. Cone, extended holder,	8	4½	"	3.50	4.38
17. Flat with ext. sh. hdr.,	7	2¼	"	2.50	3.90
18. Flat,	7	1¼	"	1.50	2.65
19. Flat,	8	1¼	"	1.75	2.19
20. Flat, extended holder,	8	2¼	"	2.75	3.44

The Cone shade without the extended holder, Nos. 48-21 have an attached shade-holder, the shade being but 7 and 8 inches in diameter allows the inside surface to be close to the filament of the lamp, giving the shade greater power of radiation.

Nos. 47-22 are respectively 7 and 8 inches in diameter with extended holder which allows the shade to come down closer to the lamp filament than the Cone shade without the holder. By the extended holder the light of the lamp is concentrated, thus ensuring greater illumination in a smaller area.

Nos. 18-19 are respectively 7 and 8 inches in diameter and allow broad diffusion of the light when the lamps are placed for general illumination close to the ceiling.

Nos. 17-20 are 7 and 8 inches in diameter respectively and have extended holders which allow the radiating surface of the shades to come down to the filament of the lamp, thus effecting a greater illumination over a smaller area than the same shade without the extended holder.

We do not make a larger shade than 8 inches in diameter. We find the 7-inch shade the most efficient. Large diameter shades are not as efficient as small, the closeness of the radiating surface to the filament of the lamp and the position that the radiating surface of the shade takes with the extended holder allows the efficiency of the radiation to be increased.
